

HOW MANY INSTALLATIONS ARE PERMITTED?

The program is licensed to ONE named user (not a location). If you have a license you're allowed to install the program on TWO machines, provided that you're the ONLY person using the program. You'll need a separate unlock code for each machine. Only one "lab computer" per license is permitted. If the program is installed on a lab computer, it cannot be installed on any other computers.

Simply follow the instructions for obtaining an unlock code, and send us the number for each machine. If you change computers while your license is in effect, contact us for a replacement code. The software must be uninstalled from the old machine before requesting a new code.

The above applies to licenses purchased at the corporate rate and at the academic rate. It does NOT apply to licenses purchased at the student rate. Students who get the program at this deeply discounted rate are allowed to install the program on one machine, but we will provide a second license if you replace your computer.
